ROHITH RAJ NAMBIAR

Kannur, Kerala, India | +91 9605860539 | rohithrjnr43@gmail.com | linkedin.com/in/rohith-raj-nambiar | github.com/rohithrjnr | Passport No: BD312585 | Date of Expiry: 19/08/2036

PROFESSIONAL SUMMARY

AI-Powered Full Stack Engineer with 3+ years of experience building and maintaining enterprise web applications using C#, .NET Core, Angular, SQL Server, and REST APIs. Experienced in ERP development, backend architecture, application automation, multi-tenant application environments, and AI-assisted software development. Familiar with generative AI, large language models (LLMs), prompt engineering, and applying AI tools to improve development workflows, documentation, problem-solving, and code quality.

TECHNICAL SKILLS

AI and Generative AI: Generative AI, Large Language Models (LLMs), Prompt Engineering, AI-Assisted Development
Backend: C#, .NET Core, ASP.NET Core, ASP.NET Web API, MVC, Entity Framework Core, LINQ, RESTful APIs
Frontend: Angular, React, TypeScript, JavaScript, HTML5, CSS3, Bootstrap
Database: Microsoft SQL Server, MySQL, Stored Procedures, Query Optimization, Indexing, Database Design
Tools and DevOps: Git, GitHub, Postman, CI/CD, IIS, Docker (Basic), Python

PROFESSIONAL EXPERIENCE

Product Engineer Level 2 | Gritstone Technologies | Dec 2025 – Present
• Developed and maintained scalable enterprise web applications using .NET Core, Angular, C#, and SQL Server across business-critical workflows.
• Designed, implemented, and optimized RESTful APIs, integrating backend services with Angular-based user interfaces and business processes.
• Improved database performance through SQL query tuning, indexing, stored procedures, and data-access optimization.
• Work across backend, frontend, and database layers to debug issues, implement enhancements, and deliver reliable production features.
• Use AI-assisted development and generative AI tooling to accelerate coding, technical analysis, documentation, and development workflows.

Full Stack Developer | A & D Info Solutions | Sep 2023 – Dec 2025
• Developed and maintained ERP modules using Angular, C#, .NET, SQL Server, and REST-based service integrations.
• Improved ERP workflow efficiency by 25% by enhancing application processes, production, and streamlined business logic.
• Improved SQL/database performance by 40–60% through query optimization, indexing, and database-level performance tuning.
• Automated database backup processes, reducing manual operational effort by 80% and improving consistency of backup execution.
• Implemented application features across UI, API, and database layers while troubleshooting defects and supporting production requirements.

Application Developer | Freelance | Jun 2023 – Sep 2023
• Delivered 5+ business applications for client requirements using Angular, React, .NET, C#, SQL Server, and related web technologies.
• Built inventory management systems, business workflow applications, and mobile/web solutions from requirements through implementation.
• Designed database structures and optimized SQL queries to improve application responsiveness and reduce inefficient data operations.
• Worked directly with client requirements, translating business needs into practical application features and maintainable technical solutions.

PROJECTS

Vintix E-Commerce Platform | Angular, .NET Core, C#, SQL Server
• Developed a full-stack e-commerce application with an Angular frontend, .NET Core backend, and SQL Server database for product, cart, order, and business workflow management.
• Implemented RESTful APIs and backend business logic to support frontend operations and structured application data flow.

• Applied relational database design, SQL queries, and backend validation to support reliable transaction and inventory workflows.

Automated Email Reminder Service | C#, SQL Server, Console Service

• Built a background/console-based service to automate scheduled email reminder workflows using C# and SQL Server.

• Implemented database-driven reminder processing to identify pending notifications and reduce repetitive manual follow-up activities.

• Designed the service around reusable processing logic and database access for reliable execution of recurring reminder jobs.

Inventory Management Application | .NET, SQL Server

• Developed an inventory management solution for maintaining products, stock records, and business transactions using .NET and SQL Server.

• Implemented CRUD workflows, database-backed business logic, and reporting-oriented data access for day-to-day inventory operations.

• Focused on maintainability and performance through structured backend logic and SQL query optimization.

Task Manager | Angular

• Built an Angular-based task management application for organizing, updating, and tracking work items through a structured web interface.

• Improved task tracking efficiency by 35% through streamlined task workflows and a centralized user interface.

Budget Allocation App | React

• Developed a React-based budgeting application for allocating and tracking budget items through an interactive web interface.

• Improved budgeting workflow efficiency by 20% by simplifying data entry, allocation, and tracking operations.

ML Student Predictor | Machine Learning

• Built a machine-learning-based student prediction project using data-driven modeling techniques to generate outcome predictions.

• Improved model accuracy by 40% through iterative model development, feature/data refinement, and evaluation.

Portfolio Website | React, JavaScript

• Developed a responsive personal portfolio website using React and JavaScript to present technical skills, projects, and professional experience.

• Improved page load time by 15% through frontend optimization and more efficient client-side implementation.

EDUCATION

B.Tech in Information Technology | College of Engineering, Trikaripur | 2019–2023

CERTIFICATIONS

• IBM Full Stack Developer
• Front-End Web Development
• JavaScript Algorithms & Data Structures
